

ROLDECK

STARLINE

LEADER

The Original

Starline, the manufacturer of Roldeck, is the leader in the field of swimming pool covers. The first Roldeck was produced more than 35 years ago by Starline and since then we have been the innovators in the world of automatic swimming pool covers.

A Roldeck enhances the safety of a pool, saves energy and lends an aesthetic appearance to a pool. Not only that, it is "The Original"! The Starline Roldeck even meets the stringent French safety standard NF P90-308.

A THING OF BEAUTY

The most attractive swimming pool cover

With a Starline Roldeck a covered swimming pool is also a thing of beauty. It's easy to operate and it's durable. You can even achieve energy savings of up to 70%. It also keeps your pool water clean and if used in conjunction with a safety ledge, handrail or child safety lock, can enhance the safety aspect.

The Starline Roldeck offers you more than just ease of use and durability. It is by far the most attractive solution for protecting your pool water. The taut lines of the floating slats refine the appearance of your swimming pool. Starline Roldeck offers you a number of possibilities that all have one thing in common: the unparalleled Starline quality.

One press of the button...

Why do things the hard way. A Starline Roldeck is the most practical and comfortable swimming pool cover that you could wish for. The user-friendly control allows your swimming pool to be covered with ease, even for short periods.

The silent drive motor operates with just one press of the button. The drive mechanism stops automatically as soon as the cover has fully opened or closed but you can also stop it at any moment in between. Remote control is also an option and is just as easy as locking and unlocking your car. In addition to this ease of use, a Starline Roldeck also offers extra energy saving and you don't have to spend as much time on maintenance. That's good for you *and* good for preserving your swimming pool.

MOST COMFORTABLE COVER

Starline Roldeck makes it all possible

The Starline Roldeck consists of a system of floating slats that are rolled around a stainless steel roller. The cover is opened and closed automatically and silently by means of an optional in-roller motor. The major benefit of an in-roller motor is that it can be repaired or even replaced at any time, without having to drain the water from the pool. The drive and the roller mechanism are integrated into the swimming pool and are therefore virtually hidden from view.

Advanced technology and a special recess in the swimming pool allow the Starline Roldeck to be installed entirely below the surface of the water and thus be hidden away under the decking. The result is a cover that seems to appear from nowhere.

The multiple options make the Starline Roldeck even more attractive for all shapes and sizes of swimming pools – square or round, large or small – there are virtually no limits. Whether it's a new or existing swimming pool, inside or outside, polyester, vinylster, lining or tiled, a Starline Roldeck is the ideal swimming pool cover.

MULTIPLE OPTIONS

INCREASES SAFETY FOR CHILDREN AND PETS

Safer for children and pets

The Starline Roldeck is not just energy-efficient and maintenance-efficient; it also increases safety for children and pets. The strong slats ensure a construction that can withstand an impact. A Roldeck that is used in conjunction with a safety ledge, handrail and a child safety lock, enhances the safety aspect.

SUPREME RELIABILITY

Easy to use and reliable

The use of top quality materials guarantees a long operational life. And thanks to more than 35 years of experience the quality, ease of use and reliability of the Starline Roldeck are unsurpassed.

As the inventor of the Roldeck swimming pool cover, quality and innovation are on the top of Starline's agenda. In recent years numerous improvements have been made to the construction of the Roldeck, such as the unique Roldeck Protect Coating. This coating ensures that a Roldeck can also be used perfectly in conjunction with the current trend in swimming pool water disinfection: salt electrolysis.

By using the very latest manufacturing techniques a product is also created that can always be supplied to a precise size and which operates without any problems. When leaving the factory, each Roldeck is subjected to an additional quality control check and is supplied as a ready to fit pack, including all of the required components and materials. That's how Starline guarantees a cover that will give you a great deal of pleasure and ease of use. And a cover that you'll be proud to show off!

PVC slats

These slats are available in white, cream, grey, blue, transparent (slight blue tint) and solar. Combined with underwater lighting, the transparent slats create an attractive ambience in the evening. The solar version heats the swimming pool water using the heat from the sun. The first rays of sunshine are sufficient to already heat up the pool water, as a result of which virtually no additional heating is required during the summer months.

HQ slats

These slats are available in solar and crystal clear and are made from the best quality polycarbonate that is currently available on the market. Whilst other polycarbonate slats have the UV blocking layer applied afterwards, the Starline HQ slats have this incorporated into the raw material itself. This makes the Roldeck HQ slats even more resistant to wear. The result is an extremely durable swimming pool cover that can withstand extreme weather conditions and high temperatures.

EXTREMELY DURABLE

ProFlex slats

Roldeck ProFlex is unique due to the solid PVC foam slats that offer greater stability and ensure a perfect side finish. This allows the cover to fit precisely within the dimensions of the swimming pool, whatever its shape.

Roldeck ProFlex slats can remain on the water throughout the winter, even at temperatures from -40°C to $+70^{\circ}\text{C}$. The slats are interconnected using flexible joints and thus prevent leaves and suchlike getting between them.

The slats have a high insulation value, they are impact resistant, flexible and are easy to keep clean. Roldeck ProFlex slats are available in grey, cream and blue.

PERFECT FINISH

EASY TO OPERATE

Roldeck above-ground

For those opting for an above-ground roller for the Roldeck slatted cover there are two systems available.

Roldeck Housing System

This housing consists of a self-supporting aluminium top cover with two white polyester end caps. This housing covers your Roldeck and protects it against the effects of the weather. The Roldeck Housing System (a and b) is suitable for both new and existing pools. It can be operated using a key-switch and/or remote control.

Roldeck solar powered Easycover System

The cover is operated with a single press of waterproof touch controls, which are protected from children operating them via a key-switch on the side console. The Roldeck Easycover System (c) is available with PVC slats in white, cream and grey, HQ slats in transparent and solar and ProFlex slats in grey, cream and blue. The polyester side consoles are available in white and light-grey, or for an additional price they can also be supplied in anthracite. Roldeck Easycover operates entirely on solar power and is easy to install, without architectural or electrical measures.

(a)

(b)

(c)

Roldeck in-ground bottom operated

Rolling up the cover from the bottom of the pool can be achieved in a variety of ways. For round pools this is only possible using a dual roll-up and roll-out bottom unit (1) which is covered by a lid that opens and closes automatically.

Depending on your specific requirements, for all straight and semi-circular pools this is possible from the bottom or from a recess behind the pool. If you don't wish to lose any swimming area at all then choose the recess option in the bottom of the pool. This recess can be finished using a fixed lid (2) or a lid that opens and closes automatically (3). The latter option is compulsory for public pools.

If you opt for a recess behind the pool then this can be installed in the bottom, behind the pool (4). The recess is screened from the swimming pool by means of a polyester plate.

Yet another option for existing pools is rolling from the bottom of the pool. The roller is hidden away underneath a polyester corner cover (5). This corner cover offers a number of important benefits: it is ideal for existing pools because it does not require any structural changes to the pool (retro-fit). It also offers extra fun for children. If required, the polyester parts can be tiled or supplied in any RAL colour of your choice.

MAXIMUM SWIMMING AREA

(6)

(7)

(8)

Roldeck in-ground surface operated

There are three options if you decide to install the roller directly under the water surface.

Installation of a recess behind the pool. This recess is separated from the pool by a brick or concrete wall (6) or by a polyester plate (7). The top of the roller can be finished using optional adjustable cantilever pit brackets that allow you to lay the decking over the roller so the Roldeck appears to come from nowhere.

If there is a lack of space behind the pool then you can also choose to install the roller in the pool (8). This can also be hidden away under the decking.

INVISIBLE MECHANISM

UNIQUE QUALITIES

Ten unique qualities of the Roldeck

- The Original – since 1973
- Extremely user-friendly
- Most reliable in-roller motor on the market
- Optimum safety if used in conjunction with handrail, safety ledge and/or safety lock
- Can be installed both above and in ground
- Complete high-quality range for new and existing pools
- Widest range of slats (PVC/ProFlex/HQ)
- Most reliable partner for your cover
- Roldeck Protect Coating: unique solution for saltwater pools
- Quality is assured by a long guarantee period (up to 10 years)

About Starline

Starline dealer network

Starline has an **extensive international dealer network**, consisting of swimming pool builders and installers that are specialists in using Starline products. A major benefit, because a dealer is never far away! You can count on quality, reliability and the best service. You can also opt for a service and maintenance contract so that you can enjoy even more of your purchase. Please ask your nearest dealer for details. Share your wishes with us!

Service

By choosing Starline you are choosing a product that will give you years of pleasure, backed up by Starline's outstanding service. Starline has its own Technical Support Department that will advise and assist your local Starline dealer if required.
